APPLICATION PROGRAMMING INTERFACE (API)

Documentation

Below are the methods to call API.

1. CURL

```
<?php
$username = 'provided by ini';
$password = 'provided by ini';
$message = 'message data';
$destination = 'desire cell no'; //9999999999
$sender = 'senderId';
$url = 'http://api.ininepal.com/api/index?';
$string = 'username={ $username }' &
        'password={ $password }' &
        'message={ $message }' &
        'destination={ $cellNo }' &
        'sender={ $sender }';
$url_final = $url . $string;
$ch = curl_init();
curl_setopt($ch, CURLOPT_URL, $url_final);
curl_setopt($ch, CURLOPT_RETURNTRANSFER, true);
$response = curl_exec ($ch);
curl_close ($ch);
?>
```

2. file_get_contents

```
<?php
$username = 'provided by ini';
$password = 'provided by ini';
$message = 'message data';
$destination = 'desire cell no'; //9999999999
$sender = 'senderId';
```

```
$url = 'http://api.ininepal.com/api/index?';  
$uriString = 'username={ $userName }' &  
            'password={ $password }' &  
            'message={ $message }' &  
            'destination={ $cellNo }' &  
            'sender={ $sender }' ;  
$url_final = $url.".$url_query;  
$response = file_get_contents('{ $uri_final }');  
?>
```

Response will be in web status format

1. 1701 == success
2. 1501 == IP verification fail
3. 1502 == Invalid authentication
4. 1503 == User validation fail
5. 1504 == Invalid sender
6. 1505 == Invalid message
7. 1506 == Invalid destination
8. 1507 == Problem in DLR
9. 1508 == Invalid valid in type field
10. 1509 == Insufficient Credit
